

Salad Bowls...made simple!

Salads have evolved over the years & it's no longer lettuce, tomato & cucumber with dressing. Now we can have grains, protein, veggies, fruit, nuts, seeds & more.

So how do you make a nutritious, delicious, easy salad bowl? Well the possibilities are endless but here's a bit of a guide to get you started. All of these recipes contain good amounts of protein, fibre, vitamins & minerals, along with complex carbohydrates which help keep our blood sugars stable.

As with all salads the **MORE VEG** the better, do not be shy & choose veggies you love, fruit is also welcome, my recipes are just guidelines to help you get the hang of creating amazing salads yourself

Best ways to ensure you can always make a quick salad:

1. Keep a bowl of your favorite veggies chopped up in the fridge - if kept in a sealed container or bowl they'll last 4-5 days
2. Try chopping up cabbage, kale & grated carrot for a great base to any salad or even just on it's own. Add in bell peppers, broccoli, beets, zucchini, pea pods or avocado (though best added fresh).
3. Make 1-2 cups of uncooked quinoa (about 2-4 cups cooked) & keep in the fridge for 3 days. This is a great addition of protein & fibre to salads. *Do this with your favorite dressings too for up to 5 days.*
4. Have chickpeas, kidney or black beans to hand as these can also be used in salads, even as a swap for quinoa in some of the recipes below.
5. Keep protein sources ready to eat as well, hard boiled eggs, chicken, tofu, cheeses like feta, cooked or smoked fish & shrimp. All can be stored for approx. 3 days in the fridge & mixed into salads or enjoyed on the side.
